

Embossed Microfiber Cleaning Cloth

In Hot Stamping, i.e., Embossing, a logo is stamped on the microfiber cloth's surface, forming an "inset" in the fabric. Embossed Opticlean microfiber cloths are made of 70% polyester and 30% polyamide. The surface has a slightly chamois-like feel, which works excellently as a cleaning cloth for glasses. This product is OEKO-TEX Standard 100 certified and manufactured in Europe in an ISO 9001 and ISO 14001 certified factory.

The up-to-date stock color selection is available directly on the product page. Printing cannot be combined with this product; the cloths are only available pre-dyed and with an embossed logo. The maximum size of the brass blind printing mold is 150 x 100 mm. However, pay attention to the dimensions of the selected cloth.

The logo must be in vector format. Deliver your artwork, for example, in PDF format, using the logo as a monochrome vector image.
