

Wooden Conference Badges

Wooden Conference Badges are manufactured using FSC®—and PEFC™-certified birch plywood. All badges are cut to shape using laser cutting. The round hole for the lanyard attachment is 0.2" in diameter and located 0.2" from the edge. Custom attachment holes are available if required. Our In-Stock shapes are listed in this file. Virtually any shape is possible for a surcharge.

IMPORTANT!

Wooden Conference Badges are made with natural wood. As with all things from nature, perfect imperfections affect the shape of the product. Due to minor changes, like a slightly concave shape, the printing position might show slight movement between each badge. Avoid graphics that follow the edge of the product to make the movement less visible.
